

Dr. QuickLook™ Intraoral Dental Viewer

Needs no training,
software or
computers!

With DrQuickLook™ you can freeze sharp, crystal clear images one at a time and then zoom by 3X. Also has live survey mode, perfect for operatories and hygiene rooms. Makes conversations with patients easier!

DrQuickLook™ does not store or print images, it's really a Patient Dental Viewer. It provides the patient with a visual understanding for personalized dental care. Perfect if you *don't have or want* a traditional intraoral camera.

Have a traditional Intraoral Camera now? Consider using DrQuickLook™ as a back up dental viewer for simplicity and it's *QUICK...* Ease of use.

Patients will visibly see calculus deposits, caries, fractures and fillings. Also, a patient looking at a screen in their own hands 12 inches away is empowering. **After treatment, you can show them a great final result.**

And talk about simple... Needs no training, no software, no computers, no USB cords. You can learn how to use it in one minute, it's that easy!

Enlarging a tooth with a fracture on the LCD screen up to 3.5 inches is a BIG TOOTH!
